

# HOW H1N1 SPREADS

In addition to handwashing and hand sanitizing, a new study spells out the need to **disinfect surfaces** as part of a flu-prevention strategy. Researchers found your greatest risk of exposure (52%) comes from being in close contact with an infected person who coughs followed by (31%) of placing your hands on a contaminated surface. The study points to the need to cover coughs, disinfect touching surfaces, and protect against airborne cough particles.
